

Seminal Fluid Collection for Culture (Sperm Culture)

In the absence of specific request from your physician, it is advised not to perform the test during antibiotic therapy.

Allow at least 15 days to pass since the last antibiotic dose.

To avoid contamination from the normal bacterial flora of the urethral meatus, the collection should be preceded by a thorough cleansing of the external urethral meatus.

- Use a sterile wide-mouth container.
- After thoroughly washing the periurethral area and hands, collect the sample directly into the container.
- Return specimen within 2 hours of collection.

I, the undersigned (surname and name) _____, declare that I have followed the instructions provided in this information sheet.
